Sempra Energy®

Sempra Energy

- ▶ Sempra Energy Develops Owns and Operates Large-Scale Energy Projects
- ▶ Sempra Generation is Focused on Wind and Solar Energy Projects in the Southwest
- ▶ Sempra has Substantial Financial and Technical Resource to Support Project Development
- ▶ Founded: June 26, 1998
- ▶ Headquarters: San Diego, CA
- ▶ Revenues: \$11.4 billion
- ▶ Net Income: \$1.1 billion
- ▶ Assets: \$30.1 billion
- ▶ Employees: Over 14,000
- ▶ Generation: 2,600 MW
- ▶ Customers: 29 million

Sempra Energy®

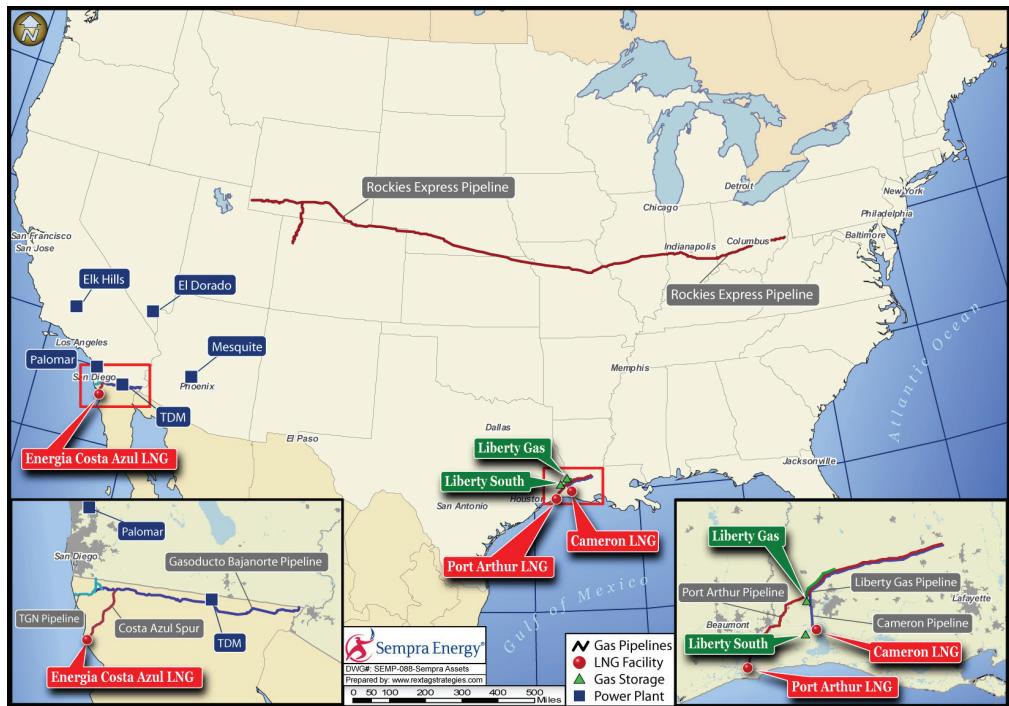

Sempra in the Community

- ▶ Sempra has a long-standing commitment to the communities where we live and work
- ▶ We maintain our focus of investing our energy, talent and financial resources to improve the quality of life for our neighbors, customers and employees
- ▶ In 2007 alone, Sempra Energy companies and its employees invested more than \$16 million dollars internationally in areas including:
 - Environment & Sustainability: Integration of a sewage treatment plant into our Mexicali power plant – TDM - to process water for the facility. Program sponsorships also include community clean-ups, conservation drives, recycling programs
 - Health & Safety : Partnerships with fire, police and hospitals to keep communities safe
 - Education & Workforce Development: Company-sponsored math & science alliance provides stipends to teacher for classroom equipment and materials, and fieldtrips/projects
 - Economic Development & Diversity: Supporting organizations that bring create economic health in the region and that celebrate the diversity of our rich communities
 - Employee Involvement: Employees donated more than 20,000 volunteer hours and over \$250,000 from their own paychecks in support of community programs and events in 2007

Recent Sempra Infrastructure Projects

Sempra Energy®

Rockies Express Pipeline

- Capital of \$4.4 billion; Sempra's share is 25%
- Entrega segments operational
- Received FERC approval fro REX – West
- Executed construction contracts for REX – West
- Filed for FERC approval for REX – East
- Purchased all pipe and compression

Sempra Energy®

Energía Costa Azul LNG

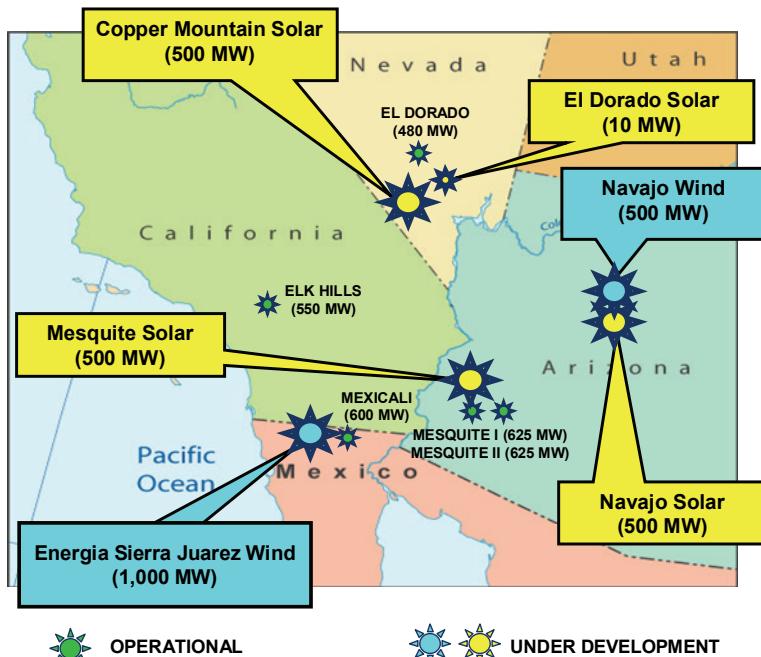

- ▶ First West Coast LNG receipt facility
- ▶ Construction completed Q2 2008
- ▶ 1.0 Bcf/d with expansion up to 2.5 Bcf/d
- ▶ Capacity fully contracted
- ▶ Approximately \$945M capital cost

Sempra Energy®

Sempra Generation

▶ Currently owns and operates 2,630 MW of natural gas-fired generation

- Located in high-growth region
- Natural gas is the competitive fuel of choice in California
- Focus on contracting off-take long-term; currently 75% hedged

▶ Developing large-scale Solar projects adjacent to existing natural gas-fired generation

- 2,000+ MW of potential capacity

▶ Developing a large-scale Wind project in Mexico to serve U.S.

- 1,000+ MW of potential capacity
- 20-year PPA with SCE for the 250 MW first phase of project

▶ Developing large-scale Wind and Solar projects on Navajo Nation

Sempra Energy®

Sempra Generation Western Fleet

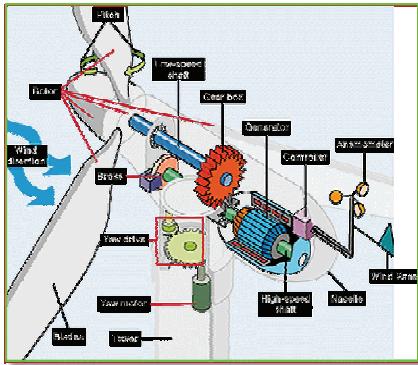

MesquitePower
A SEMPRA ENERGY DEVELOPMENT

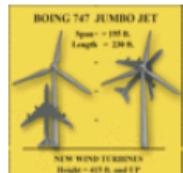

Sempra Energy®

Large-Scale Wind

A 2.5 MW Wind Turbine is taller than the 19-floor Sempra Headquarters and has a blade diameter wider than a Boeing 747

Sempra Energy®

Large-Scale Solar Photovoltaics

- ▶ The size of PV projects has grown dramatically over the last 2 years
- ▶ This 40 MW project is currently under construction in Germany
- ▶ A 100 MW project in the desert southwest will require approximately 1 square mile of land

photomontage

Sempra Energy®

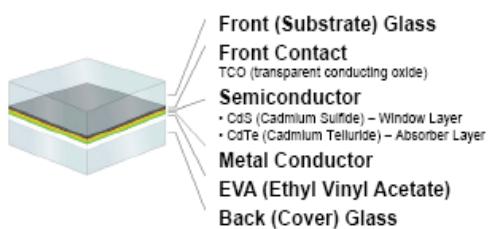

The Photovoltaic Effect – Electricity from Sunlight

- ▶ When Sunlight (photons) is absorbed by the photovoltaic (PV) module, the energy of the photons is transferred to electrons in the PV cell.
- ▶ PV modules have multiple cells with negative (sunny side) and positive (dark side) layers which enable electricity to flow.
- ▶ The flow of electrons from the module is “direct current”, or DC voltage.

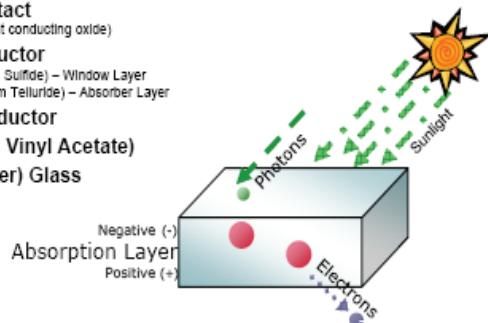

FS Series PV Module

Module Cross Section

The PV Effect

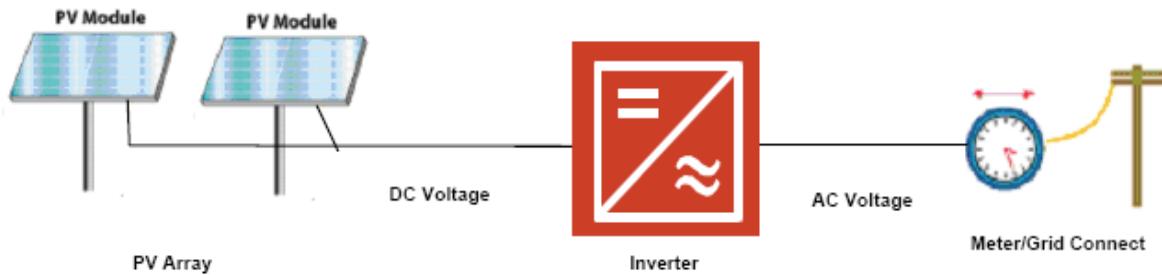

Sempra Energy®

Photovoltaic Systems – Simple and Reliable

- ▶ Modules mounted on fixed structures and convert the sun's energy into DC voltage
- ▶ Modules are plugged together to form series "strings"
- ▶ Pre-fabricated wire harnesses and junction boxes connect the multiple strings, provide safety protection and deliver the DC voltage to the inverter
- ▶ The inverter converts the DC voltage to AC voltage compatible with the utility grid
- ▶ Standard utility meters and switch gear connect to the utility grid for delivery to retail consumers

Sempra Energy®

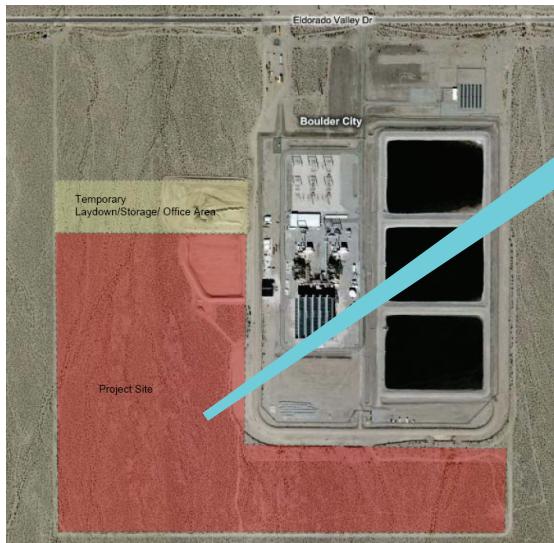

Sempra Development Team

► Sponsors:	Mike Allman (CEO) and Jim Sahagian (VP Corporate Development)
► Planning:	Mitch Dmohowski, Bill Engelbrecht
► Land/Community:	Mike Sullivan
► Corporate Finance:	Joanne Wang
► Development:	Joe Rowley, Alberto Abreau
► Legal:	Rueben Rosen, Marie Lewis
► Transmission:	Leslie Padilla
► Origination:	Leesa Nayudu
► Legislative:	Wayne Sakarias
► Regulatory:	Shawn Bailey, Dan King
► Public Relations:	Art Larson
► Financial Analysis:	Jean Massrour, Tina Chase
► Operations:	Mike Gallagher, Ed McMurren
► Engineering:	Bill Keller, Dan Hyatt, Tom Jennings
► Accounting:	Bruce Folkmann
► Tax:	Debra Urman-Botkin
► Permitting/Environmental:	Joan Heredia
► Wind Consultant:	Ryan Zwilling at Garrad Hassan

Sempra Energy®

El Dorado Solar PV

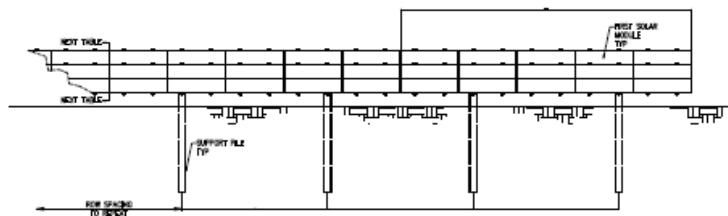

Location	Boulder City, Nevada adjacent to Sempra CCGT
Capacity	10 MW with potential for expansion to 100+ MW
COD	12/01/2008
Capex	\$40 Million
Key Components	168,300 FS Series 2 Modules 20 Xantrex GT500E Inverters 22,440 ea 8.5' steel posts
Capacity Factor	27%
PPA Off-taker	TBD (SCE, PG&E, SDG&E, LADWP, APS, SRP)
PPA Term	TBD
PPA Price	TBD
Land	88 acre flat desert site Boulder City Solar Energy Zone
Interconnect	4160 VAC (through EDE auxiliary bus bar)
Construction Schedule	6 months

PV INVERTER (ASSEMBLY - SET. 3)

NOTES:

1. THE DRAWING REPRESENTS THE BASIC ARRANGEMENT AND IS SUBJECT TO MODIFICATION DUE TO THE REQUIREMENT OF THE CONTRACTOR.
2. PROTECTIVE SYSTEM CIRCUIT BREAKERS SHALL BE PROVIDED BY THE CONTRACTOR FOR THE PROTECTION OF THE SYSTEM.
3. FUSED CONDUCTORS (WIRE) ARE EXCLUDED. WE PREFERRED TO THIS SOLAR AND WIND USE OF ELECTRICAL COMPACTOR.
4. THIS DRAWING IS NOT A DESIGN DRAWING. IT IS FOR REVIEW AND REVISION BY THE PV SYSTEM PROVIDER/CONTRACTOR TO DESIGN SUITABLE ELECTRICAL SYSTEM.

SYMBOLS / LEGENDS:

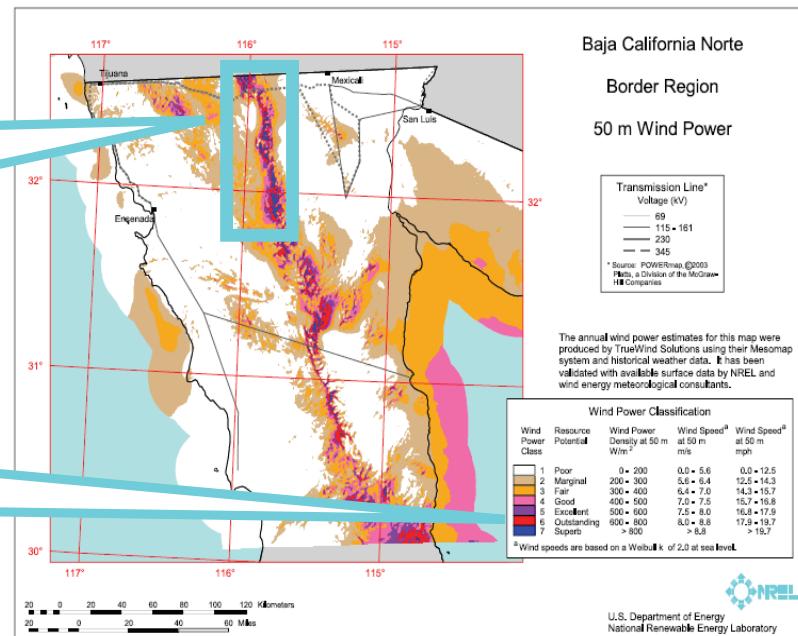

Sempra Energy®

Energia Sierra Juarez Wind

The border region of Northern Baja Mexico has a high quality wind resource available for more than 1,000 MW of project development

Potential wind project sites in Baja located near the border 75 miles east of San Diego would have easy access to the US transmission system

Average wind speeds in the region are above 7.5 meters/second and can generate net capacity factors between 33% - 36%

Sempra Energy®

The Bottom Line

Sempra Energy

- ▶ Is a Fortune 500, \$11 billion revenue energy company based in San Diego, CA
- ▶ Has demonstrated success in developing large-scale energy projects
- ▶ Has substantial financial and technical resources to develop, own, and operate these projects
- ▶ Is actively developing large-scale Wind, Solar Photovoltaic, and Biomass Projects
- ▶ Wants to develop Wind, Solar Photovoltaic, and Biomass projects in Hawaii
